

A Digital Race Car for a Digital World

Races today are won with data. The ability for a driver to interpret data and to converse with engineers in a language both understand is oftentimes the difference between winning and losing. That is why we start with the multi-championship winning Ray Formula Cars GR11, and equip it not just with an Elite Engines 2-liter engine and a Sadev sequential gearbox controlled by a Pro Shift paddle shifter system with rev matching, but also with AiM Formula Dash 2 data acquisition and SmartyCam video systems.

THE FUTURE OF DRIVER DEVELOPMENT

Training Events

Basic 2-Day – The first step in your driver development program. Two eight-hour days of instruction combined with 5 hours of on-track time get you acclimated with the art and science of driving a modern race car. Available at many popular tracks around the country, successful completion of a Basic 2 Day program qualifies you for a provisional SCCA Regional Competition License

2 Day Lapping – Step 2; gain speed, gain confidence or just learn new tracks. A minimum of three 30-minute sessions per day will get you up to speed, while available post-session data debrief and video analysis allow you to maximize your results.

Lucas Oil Formula Car Race Series

Today we race. For the karter looking to move up to cars, The Lucas Oil Formula Car Race is the most technically relevant step between karts and bigger cars. For the more casual racer, equal cars and arrive-and-drive convenience allow you to focus on racing - and winning. We'll take care of the rest.

Practice – Two 40-minute sessions in race conditions, with lap timing to let you see how you've progressed and how you compare to other racers.

Race Day – Think you've got what it takes? Go head-to-head with other racers and find out. Each Race Day consists of a 30-minute practice, 25-minute qualifying session and a 30-minute race (each Race Event consists of two Race Days).

The Convenience of Arrive & Drive

Whether your goal is a career or a hobby, our à la carte programs allow you to customize your experience with as little or as much driving as your budget, schedule and stamina can handle.

Purchasing a race car and the equipment required to maintain and transport it is a major investment of time and money. The Lucas Oil School of Racing takes care of everything for you; we provide the equally prepared cars, expert coaching and even the hospitality. If you don't want to bring your suit and helmet, or aren't yet ready to invest in your own equipment, we'll provide you with a Sparco racing suit and a Bell Racing helmet to use during our programs.
